

VS BLR 404

ONE SHOT TREATMENT FOR BABY BOILER

WATERTREATMENT
BOILER

Description

This product is catalyst sulfite blended with Phosphate, which scavenges oxygen to a level of 0.00005 ppm with 30 seconds. It also removes the existing scale from the boiler gradually; it prevents flashing of oxygen in Boiler Drum. Thereby preventing pitting type of corrosion in boiler.

Specification

Colour	Colourless
pH	9.5 to 9.11
Solubility in water	Completely soluble in water.
Base	Sulfite. (Catalyzed)

Advantages

- Catalyzed product has to dose less as compared to non-catalyzed. Therefore the TDS remains under control.
- Scavenges oxygen very fast, prevents the damages to the boiler drum.
- Prevent pitting type of corrosion in boiler.
- Removes the existing scale gradually.

Chemical Dosing

VS-BLR-404 is dosed @ 5 to 10 ppm depending on the type of system installed.

Handling

It is very safe to handle, in case of a eye contact wash with lot of water and give medical assistance immediately.

Packing

50 liters HDPE carboys
